

## Jolie's recommendations

Nuclear science community is excited about how we can use nuclear science to address challenges in AFC

We have much of the tools and people to address they needs

Challenges that we could help to address

- data that complement modeling
  - o data not there
  - o benchmarking models

What may need

- modest upgrades to facilities
- additional funds to support early career scientists

Attract and retain early career scientists (undergrad & grad students and postdocs) who are excited about using nuclear science to meet nuclear energy needs
